

Bugs fixed:

- pxe-server stop action fails to stop vblade process for root filesystem
- cloudprint broken due to non-obvious dependency on missing python3-requests package
- on RPi and RPi IoT, pasetup tweaks incorrect ALSA control (numid=3 should be numid=1)
- on RePC and NUC64, vmview lacks "--usbAutoConnectOnInsert=TRUE --usbAutoConnectAtStartUp=TRUE"
- workaround needed for wpa_supplicant + kernel bug affecting WPA2 Enterprise auth that Debian won't fix
- /var/lib/dhcp must be removed from /etc/persist/exclusions in Stretch and Buster because of DUID use
- dash echo bug causes DOMAIN\[0-9].* to be mishandled - hdx and vmview must use bash to avoid this
- on RPi, vmview provides dual screen H.264 warning even when not using vmview_submode=blast
- new PulseAudio arrangement unsatisfactory for various reasons on RePC and ISFF - rollback required
- splash screen broken on NUC64
- rdp-open must force a zero exit code and clean up the RDP file to work around undesirable xdg-open behaviour
- new version of smplayer needs ini file setting to suppress donation popup
- TFM contains outdated firmware that may not work with newer 4.19 kernel builds

Special customer requests:

- unofficial FreeRDP patch (<https://github.com/FreeRDP/FreeRDP/issues/4660>)
- out-of-tree rtw88 driver on RePC
- out-of-tree rtl8822bu driver on RPi
- patch to theoretically support version 10-12 Intel I219-V Ethernet (untested) on SFF and RePC

Significant software upgrades:

- FreeRDP 2.2.0
- VMware Horizon Client 2006 (a.k.a. 8.0.0)
- Citrix Workspace App 2009
- Chromium 83
- Except on RPi, kernel upgraded to 4.19.146
- Debian 10.6 userspace
